

Task: The Portfolio Intelligence Brief

Scenario Brief:

AIVC is an AI-focused venture capital firm that invests in and advises early-stage AI companies. The investment team needs to stay current on ~50 portfolio companies and ~200 companies in the broader pipeline. Information is scattered across CRM records, internal meeting notes, public filings, news feeds, and ad-hoc Slack threads.

RC (the principal) wants a system that can produce a structured, up-to-date briefing on any company in 30 seconds rather than the current 90-minute manual process. Your job: produce a prototype solution.

Deliverables:

A functioning prototype demonstrating the core of the solution — the most basic version that covers the vital functionality (e.g. a working slice of the retrieval/generation layer producing a briefing from sample data). **Supplementary (optional) evidence to strengthen your case:**

1. **Solution architecture** (2–3 pages or diagrams + notes): Target architecture covering data sources, ingestion, storage (structured + unstructured), retrieval/generation layer, and the user-facing briefing interface. Be explicit about technology choices and trade-offs.
2. **PRD-lite** (1 page): Define the core user stories, acceptance criteria, and KPIs for a v1. What does 'good enough to ship' look like?
3. **Build plan** (half a page): How would you sequence the work for a two-person team over 6–8 weeks? What do you prototype first to de-risk? What are the critical dependencies?

Instructions: We'd like you to spend 2–3 hours on the attached task before our next conversation. A few things to know:

- Use whatever tools you'd normally use, including AI assistants, copilots, and code generators. We're an AI company — we'd be surprised if you didn't. We're interested in your judgement, not whether you can write boilerplate from memory.
- Pick the deliverables that best showcase your strengths. You don't have to do all three — though you're welcome to if time allows.
- Depth over breadth. We'd rather see one thing done thoughtfully than everything done thinly.
- Come ready to discuss. The deliverable is a starting point for a 30–45 minute technical conversation where we'll dig into your thinking, trade-offs, and what you'd do differently with more time.
- Please submit the case no later than **24-hours before** the panel interview
